

Exploring Creation with Physical Science 2nd Edition

This course contains 16 modules which we will be spending approximately 2 weeks on each. The classroom time will be spent going over difficult concepts, answering questions, demonstrations, and completing the lab experiments from the text. From time to time we will also be doing some supplemental labs, not in the text, to better explain various concepts. During the week, you will be expected to complete the reading assignments, “On your Own” problems, and review questions at the end of each section. The “On your Own” problems should be completed as you come to them. The “On your Own” and Review questions should be checked and reviewed prior to taking the Unit Test at the end of each module. All work will be turned in at the end of a unit for grading.

Attached is a schedule for reading and assignments. This is just a guideline to let you know when things are due.
